

COMPASSIONATE CARE FOR ALL

Apex Health is a healthcare practice group that uses remote patient monitoring and data analysis to change the way preventive care is done in healthcare. Apex Health focuses on PCP corporate care management services, but also offers in person PCP, pain management, and weight management services in the US. Our patients are less likely to visit the emergency room and less likely to suffer from a catastrophic health event.

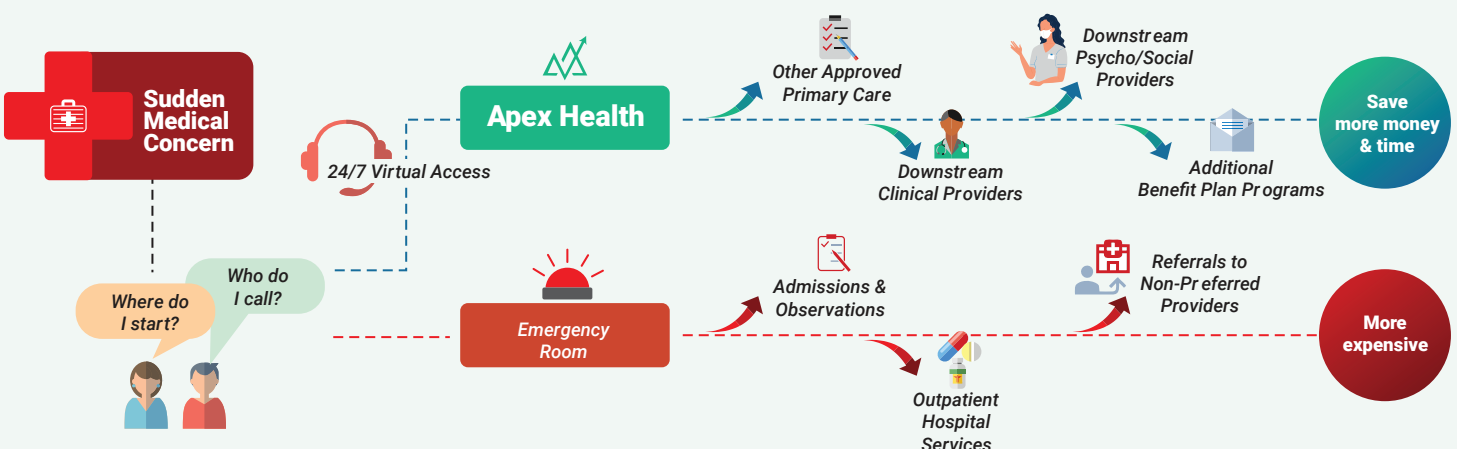

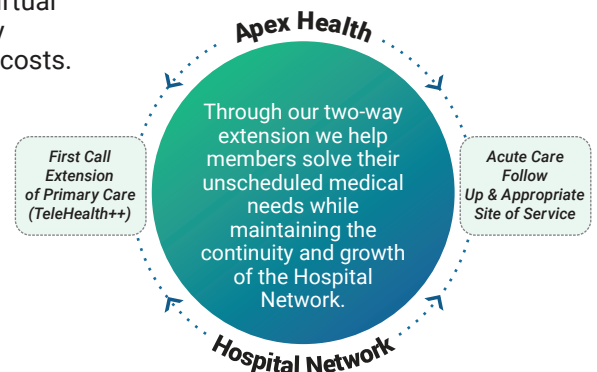

Through corporate care management, Apex Health extends the care provided by on-site health centers to enhance the member experience and reduce the total cost of care.

Apex Health can partner directly with your health clinics to extend their reach and provide a better healthcare experience for members. By providing a more convenient way of receiving care before an issue becomes an emergency, Apex Health helps you further reduce the need for emergency rooms and urgent care centers.

Apex Health offers care 24/7, allowing you access to highly-integrated virtual care to address major and minor concerns after hours. This accessibility reduces panic visits to the ER and reduces corporate care management costs.

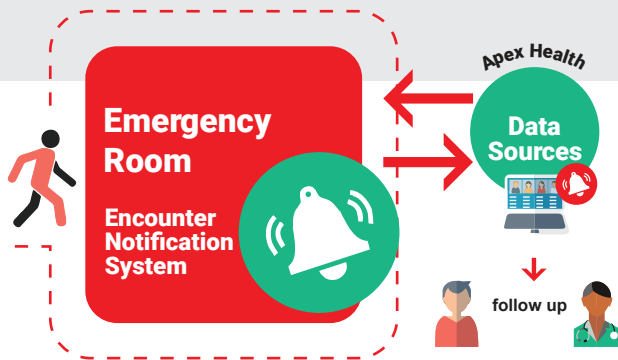

Apex Health reduces hospital in-patient and ER costs while maintaining high member satisfaction ratings.

THE APEX HEALTH EXPERIENCE

Encounter Notification Service

Apex Health uses the Encounter Notification Service (ENS) that notifies us when a patient checks into the emergency room. We then know to follow up with that patient during and after their hospitalization to expedite their recovery time and prevent readmissions.

Remote Vital Monitoring

Apex's corporate care management uses cutting edge tech (remote vital monitoring) to provide industry-changing preventative care that's cost effective.

All collaboration between hospital network and Apex Health intended to provide a seamless, clinically-integrated continuum of care to create a better member experience and reduce improper hospital utilization.

Apex Health provides a 24/7 virtual alternative to an ER visit and the resulting hospital service offering.

We stratify patients based on ER utilization and build trusted patient-physician relationships through proactive, dependable interactions.

Our care orchestration platform integrates clinical, psychological, and social resources to help solve members needs during an event and after.

We load existing plan sponsor care management programs into our clinical care processes to boost their utilization and effectiveness.

Predictive Patient Modeling
Cutting-edge patient care plans using predictive artificial intelligence

Predictive Care

Our providers use remote patient monitoring and AI to accurately assess patient's risk areas and develop a care plan designed to reduce the probability of a catastrophic health event, reduce health care costs, and improve quality of life.

Our preventive approach to healthcare means that our patients are healthier and spend more time doing what they love, and less time at the doctors.
